

SKIOLD DAMAS LOFCO

SKIOLD MAKES THE DIFFERENCE!

SKIOLD DAMAS LOFCO AIR ASPIRATOR WITH TURBO-TECHNIQUE

Lofco is a highly efficient aspirator with built-in air recycling system for the separation of light particles from grain, seed and other granulated material. Lofco is an industrial, compact, and environmentally compatible construction and is easy to operate.

Lofco air aspirator for light particles

Efficient aspirator with newly developed turbo technology

Lofco is a highly efficient aspirator with built-in air recycling system for the separation of light particles from grain, seed and other granulated material. Lofco is an industrial, compact, and environmentally compatible construction and is easy to operate.

Lofco is ideally suited for the separation of light products because of its highly efficient aspiration chamber with the newly developed turbo-technique combined with the frequency operated fan.

How it works

The material is distributed evenly due to the application of a double worm located over the feed rollers. The capacity of the machine can be adjusted by means of the feed slide at the feed roller, thus permitting the most efficient separation.

Your direct benefits

- Self-cleaning and hygienic design
- Unparalleled efficiency due to ideal distribution of material
- Zero vibrations
- Space-saving
- Low-noise
- Low power consumption
- Available with feed roller with frequency-controlled motor for speed regulation

Specifications		612	1212	1215	2512
Precleaning capacity, wheat	t/h	90	180	200	360
